

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

XII. *A Meteorological Diary, &c. kept at Fort St. George in the East Indies. By Mr. William Roxburgh, Assistant-surgeon to the Hospital at the said Fort. Communicated by Sir John Pringle, Bart. P. R. S.*

Read Jan. 29, 1777. **T**HE manner in which I keep my meteorological observations is as follows:

A thermometer without doors; a barometer and thermometer within doors: the barometer and thermometer within doors are kept close together, for the sake of correcting the barometer if required. I observe them three times a day, as *per* diary. I also set down the direction and strength of the wind, and the state of the weather. I distinguish four degrees of strength of the wind; namely, gentle, brisk, stormy, and what we call a tufoon in India, which you will find marked with the numbers 1, 2, 3, and 4, besides no sensible wind, which is marked with a cypher.

I am ashamed to say, that the rain-gage I had during the rainy season was so indifferent, that I could not with any degree of certainty measure the quantity of rain that fell

fell here. I have now got a tin cylinder, $5\frac{2}{10}$ ths inches in diameter, or $16\frac{4}{10}$ ths inches in circumference, and 30 inches deep: the quantity of rain that falls I intend to measure with a scale divided into inches and twentieths of an inch; the depth shall be set down every morning if it has rained. I have it placed on the roof of my house, which is about twenty-five feet high; at a considerable distance from any other building, &c. except the hospital, which is distant about one hundred yards, and of the same height; no trees above twelve feet high within many hundred yards.

The thermometer without doors I have placed under a small shady tree, through which the Sun cannot penetrate, at the same time it is well exposed to air and wind. Every inch on the scale of the barometer I use is divided into twenty equal parts; it is a portable one, made by RAMSDEN.

The tube of the thermometer without doors is twelve inches long, placed upon a plain open box-wood scale, made by NAIRNE and BLUNT.
